

How to use this program:

This DVD contains a variety of files designed to provide you with the resources you need to effectively deliver this presentation.

- The **Instructor Guide Document** is a printable version of the presentation that will allow you to review the information slide-by-slide.
- The **Launch Presentation** icon will open a flash file, with narration, to walk the instructor through the presentation. This will provide you with valuable insight needed to successfully deliver the course. Depending on your PC's security level, you may receive a message regarding the Active X control. This control must be allowed to run in order to view this presentation.
- The **Player.html** file will open the flash presentation (described above) in your web browser.
- The **Class Version** folder contains the Power Point presentation that should be used for the instructor-led classroom setting, as well as the WMV version of the associated video clips. Please feel free to customize this presentation to fit your audience and/or your department.

Referenced resources are also available on this DVD. Please incorporate these into your presentation to ensure that students receive the information. You may choose to assign these as prerequisites, as handouts during the course, or as post-course company activities – the choice is yours. The ISFSI's desire is to provide you, the Fire Service Instructor, with the resources to be successful.

The latest version of Adobe Reader can be found here:

<http://get.adobe.com/reader/>

The latest version of Adobe Flash Player can be found here:

<http://www.adobe.com/products/flashplayer/>

A high-speed internet connection during the presentation is required to visit referenced websites, such as the Fire Frame and UL University programs.

Depending on your PC, the program may run more cleanly if you copy the contents of the DVD to your PC. In doing so, please be sure to copy the ENTIRE contents of the ISFSI-MCCFCO folder to ensure that no internal links are broken. If you choose only to copy the Class Version of the presentation, be sure to copy the entire folder, along with videos, so that they will play correctly.

If you do experience problems with videos playing properly, please refer to this [Microsoft Knowledge Base article](#) on adding video to PowerPoint.
